

Creative thinking (one or two days)

Creativity feeds innovation. Creative thinking is not about improving what we already do: it is about finding something *new* to do. Creativity is the set of skills we use when we want to create something new.

In this enjoyable and energising workshop, we shall be on the lookout for opportunities to innovate. Our aim will be to generate innovative ideas that we can take back to work and develop.

Participants will be invited to bring to the course any thoughts they may have about areas of work where creative thinking might be useful. These might include:

- **product development within the range of surveys you produce**
- **new applications for existing products**
- **transforming client relationships (or one particular client relationship)**
- **identifying new markets or service opportunities**
- **system or process enhancements**

Objectives

As a result of attending this workshop, participants will be able to:

- Distinguish between creative and other kinds of thinking and working
- Use a range of techniques to stimulate creative thinking
- Generate innovative ideas
- Develop new solutions
